

## Description of YHZS25 Mobile Concrete Mixing Plant:

1. YHZS25 mobile concrete batching plant can be installed quickly on site. Composed of the integrate mixer, batching system, running system, feeding system, weighing system, cement silo, screw conveyor and all the necessary equipment into together, installed on a transport chassis.
2. We can deliver YHZS series mobile concrete batching plant to construction site in the hauling situation, then install quickly on site and get it to run without debugging. This equipment has the characteristic of high automatic, well mixing, high productivity, high flexibility, convenient operation, and good stability.
3. By absorbing new technologies from overseas and domestic, the mobile concrete mixing plant has such characteristics as accurate weighing, homogeneous and efficient mixing, fast and clean delivery, convenient to move, etc.

## Features of YHZS25 Mobile Concrete Batching Plant:

1. Less installation area requirement with compact design
2. Short and easy installation-uninstallation and operating (1-2 days to start concrete production, 1 day for disassembly)
3. Less foundation cost (80% less than stationary concrete batching plant)
4. No requirements for local authorizations for the installation
5. Less maintenance and operating cost
6. Less transportation cost
7. Minimized concrete transportation cost

### Technical Parameters of Mobile Concrete Batching Plant:

Specification	Unit	Value
Theoretical productivity	m <sup>3</sup> /h	25
Weighing scale Concrete	Kg	2000
Weighing scale Cement	Kg	510
Weighing scale Water	Kg	150
Weighing scale Liquid additive	Kg	15
Overall power	KW	about 60(optional parts not included)
Power source	V/ HZ	380/50
Discharging height	M	3.8
Overall weight	T	20 (optional parts not included)
Trail speed	km/h	◆?0
Specification(LxWxH) During work	M	17x3.6x8.2
During transportation	M	17.6x2.4x4.35
