

Description of YHZS75 Mobile Concrete Mixing Plant:

1. YHZS series concrete mixing plant, is a compulsory, high efficient equipment to produce plastic, dry concrete, etc., which is widely used in large and medium-sized construction, road and bridge engineering, the production of commercial concrete ideal equipment.
2. The stirring series host using JS Series twin-shaft forced type concrete mixer, mixing concrete with a homogeneous good.
3. Mixing time is short, long consumable life, easy operation and maintenance
4. It uses the latest design ideas of electronic weighing, computer control digital display control technology, electronic volume with buffer device and automatic compensation function, high accuracy.
5. The aggregate system uses a large belt width herringbone material with boardwalk, which is the ideal choice for the majority of the construction to produce high quality concrete.
6. Dynamic display on a computer screen process, the operator can easily replace the production technology parameters, adjusting the production of single to complete the required action.

Features of YHZS75 Mobile Concrete Batching Plant:

1. Advanced electronic control system
2. High degree of automation
3. Accurate measurement of performance
4. Excellent environmental performance
5. Well maintained property
6. High reliability
7. Excellent mixing performance

JS1000 Concrete Mixer

Aggregate Batching Machine

Control Room

Cement Silo

Control System

Screw Conveyor

Technical Parameters of YHZS75 Mobile Concrete Mixing Plant:

Specification	Unit	Value
Theoretical productivity	m ³ /h	75
Weighing scale Concrete	Kg	3750
Weighing scale Cement	Kg	900
Weighing scale Water	Kg	450
Weighing scale Liquid additive	Kg	45
Overall power	KW	about105
Power source	V/ HZ	380/50
Discharging height	M	3.8
Overall weight	T	27 (optional parts not included)
Trail speed	km/h	◆◆20
Specification(LxWxH)During work	M	18.1x3.6x8.2m
During transportation	M	18.6x2.4x4.35m
